Capabilities Statement

American Waterjet Robotics LLC., is the leading provider of advanced waterjet technology solutions since 2011. We specialize in state-of-the-art robotic systems designed to deliver unparalleled performance in paint stripping, surface preparation, and hazardous material removal. We fabricate and manufacture to sell the robots that do the work. We offer training at point of delivery.

AWR provides precision ultra high pressure waterjet robots and containment systems, simplifying maintenance with straightforward robotic systems. Our tailored approach enhances safety, reduces costs, and ensures consistent performance, contributing to operational effectiveness.

Our goal is to provide our customers with the equipment to get the job done in less time and without leaving an environmental footprint.

Core Competencies

- Ship Stripping, Non-Skid
- Ship Stripping-all areas
- Gun Water Blasting
- Internal Pipe Cleaning
- Stripping internal/external surfaces of storage tanks
- Removing internal rubber bushings from stern tubes
- Removing paint from hawsepipe
- Runway Stripping of debris

Differentiators

The owner is the first person to build a UHP 40k Pump and has designed pumps for leading companies. With years of experience, he is the first person to get a patent for cleaning runways with UHP water systems. Production and Maintenance is streamlined with ease of use. Our products are designed to be light and compact. We are a small company which allows us to give personable attention to our customer's needs. We stand by our products with warranties, customer service and training.
